

Please reject the National Association of Broadcasters petition 04-160. Satellite radio from XM is an important new source of information that should not be stopped from carrying local traffic and weather information. The US should be encouraging new types of services for consumers, not stifling them. Satellite radio is a burgeoning industry that will be important to economic growth. My company developed and manufactures RF microelectronic components that are in XM satellite receivers and I have three of the radios for personal use for which I pay.

Let competition continue with satellite radio addressing the market with a unique product.

Thanks,
Dan Rabinovitsj
